Cybersecurity Professional in Training | SOC & Pentesting Enthusiast

Passionate cybersecurity enthusiast with a strong focus on both offensive and defensive security operations. I specialize in bridging the gap between technical exploitation and professional risk mitigation.

My hands-on experience includes a methodological approach to penetration testing (Active Directory, Web Security) and SOC operations (SIEM triage, Phishing analysis, and Network Traffic analysis). I maintain a documented portfolio on GitHub where I transform complex technical resolutions into professional audit reports, emphasizing not just the "flag," but actionable remediations and business impact.

Currently preparing for **PJPT (Practical Junior Penetration Tester)** and **SAL1 (Security Analyst Level 1)** certifications. I am a proactive learner with an "owner" mindset, looking to contribute my technical rigor and documentation discipline to a forward-thinking security team.

Technical Toolkit:

- **Offensive:** Active Directory Exploitation, OWASP Top 10, Privilege Escalation (Linux/Windows).
- **Defensive:** Splunk (SPL), Wireshark, Phishing Investigation, Incident Response (PICERL).
- **Foundations:** Linux/Windows Admin, Python Scripting, Networking (TCP/IP).
